

SunMizer Solar Roof Kit Special Installation Tools

Installation of SM-SRS system roofing kits requires a Depth Sensitive Driver and nutsetter bit for the 5/16 Hex Head Weatherseal Screws used in the roofing system. Using a driver other than a depth sensitive driver (a regular driver or impact driver for example) can cause broken screw heads, dimpling of the metal roofing panels (oil canning) and may result in improper compression of the screw seals, resulting in leak points.

The following tools have the proper specifications for use in installing SunMizer Solar Roofing. The recommendations below are not meant to be a brand endorsement, but should be considered as a specification for the correct installation tools.

[DEWALT DW266 2,500 RPM VSR DEPTH-SENSITIVE SCREWGUN](#)

[DEWALT DW2219IR 5/16" X 1-7/8" NUTSETTER](#)
